Welcome to your CDP Water Security Questionnaire 2022

W0. Introduction

W0.1

(W0.1) Give a general description of and introduction to your organization.

Important Stakeholder Disclaimer:
Some statements in this response are, or may be considered, forward-looking statements for purposes of the Private Securities Litigation Reform Act of 1995. The words "believe," "expect," "anticipate," "project" and similar expressions, among others, generally identify forward-looking statements. AbbVie cautions that these forward looking statements are subject to risks and uncertainties that may cause actual results to differ materially from those indicated in the forward-looking statements. Such risks and uncertainties include, but are not limited to, failure to realize the expected benefits from AbbVie’s acquisition of Allergan plc ("Allergan"), failure to promptly and effectively integrate Allergan’s businesses, competition from other products, challenges to intellectual property, difficulties inherent in the research and development process, adverse litigation or government action, changes to laws and regulations applicable to our industry and the impact of public health outbreaks, epidemics or pandemics, such as COVID-19. Additional information about the economic, competitive, governmental, technological and other factors that may affect AbbVie's operations is set forth in Item 1A, "Risk Factors," of AbbVie's 2021 Annual Report on Form 10-K, which has been filed with the Securities and Exchange Commission, as updated by its subsequent Quarterly Reports on Form 10-Q. AbbVie undertakes no obligation to release publicly any revisions to forward-looking statements as a result of subsequent events or developments, except as required by law.

Additionally, terms such as “ESG,” “impact” and “sustainability” can be subjective in nature, and there is no representation or guarantee that these terms, as used in the response, will reflect the beliefs or values, policies, principles, frameworks or preferred practices of any particular investor or other third-party or reflect market trends. Any ESG, climate or impact goals, commitments, incentives and initiatives outlined in this response are, unless explicitly stated otherwise in this response, purely voluntary, are not binding on our business and/or management and do not constitute a guarantee, promise or commitment regarding actual or potential positive impacts or outcomes.

About AbbVie:
AbbVie’s mission is to discover and deliver innovative medicines and products that solve serious health issues and enhance people’s lives today and address the medical challenges of tomorrow. We strive to have a remarkable impact on people’s lives across several key
AbbVie operates as a single global business segment dedicated to the research and development, manufacturing, commercialization and sale of innovative medicines and therapies. AbbVie includes four main business units which are Operations, Research & Development (R&D), Commercial, and Headquarters. AbbVie operates forty significant Operations and R&D sites. AbbVie also operates a significant number of small Commercial affiliate offices around the globe. In May of 2020, AbbVie acquired Allergan PLC. We anticipate to add the Allergan PLC water data into the AbbVie data next year.

As we respond to the concerns of our stakeholders, we will strive to find innovative solutions that are both good for business and good for the environment. We aim to ensure that our water management practices and provisions are respectful of local needs and concerns. We also commit to using our water management knowledge and experience to address broader water issues as necessary and appropriate. We will seek to use company-wide policy, standards, and management systems to assure responsible water management programs are implemented.

Stakeholder engagement and collaborative problem-solving play a central role in the development and implementation of these programs.

We prioritize environmental sustainability within and beyond AbbVie to support our patients, people and planet. Our environmental sustainability strategy is focused on reducing our environmental footprint, growing sustainably through inspiring innovation, and engaging our workforce to steward sustainability.

W0.2

(W0.2) State the start and end date of the year for which you are reporting data.

W0.4

(W0.4) Select the currency used for all financial information disclosed throughout your response.

USD

W0.5

(W0.5) Select the option that best describes the reporting boundary for companies, entities, or groups for which water impacts on your business are being reported.

Companies, entities or groups over which operational control is exercised

W0.6

(W0.6) Within this boundary, are there any geographies, facilities, water aspects, or other exclusions from your disclosure?

Yes

W0.6a

(W0.6a) Please report the exclusions.

<table>
<thead>
<tr>
<th>Exclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leased properties (not owned by AbbVie)</td>
<td>Our small commercial affiliate offices consist of leased (non-AbbVie owned) office space that support sales &amp; marketing of pharmaceutical products and related business activities. Use of water is limited to drinking and sanitary activities common for office environments. We have estimated this volume of water and have found it to be a non-material quantity relative to our water use at our global operations and research and development sites.</td>
</tr>
<tr>
<td>Legacy Allergan</td>
<td>In May of 2020, AbbVie acquired Allergan PLC. AbbVie continues to integrate Allergan into our business processes for collecting global water data. The data submitted in this disclosure does not include the contributions from the Allergan business operations for 2021. We estimate that the Allergan business operations account for 3% of our global total water intake. AbbVie anticipates being able to include this data in future disclosure submissions.</td>
</tr>
</tbody>
</table>

W0.7

</tbody>
</table>
(W1.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

<table>
<thead>
<tr>
<th></th>
<th>% of sites/facilities/operations</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water withdrawals – total volumes</td>
<td>100%</td>
<td>Water volumes are primarily monitored in-situ (in-line) with calibrated water meters and in some cases via interpolation. At least quarterly, each operations facility reports this data to our Global EHS organization for monitoring and alignment with company targets.</td>
</tr>
<tr>
<td>Water withdrawals – volumes by source</td>
<td>100%</td>
<td>Water volumes are primarily monitored in-situ (in-line) with calibrated water meters and in some cases via interpolation at the source level. At least quarterly, each operations facility reports this data to our Global EHS organization for monitoring and alignment with company targets.</td>
</tr>
<tr>
<td>Water withdrawals quality</td>
<td>100%</td>
<td>Water withdrawals quality is monitored according to local water withdrawal permit requirements. Additionally, water quality reports from the local municipals are monitored by the site level EHS organization. For sites that are required to monitor and report this information, coverage is 100%.</td>
</tr>
<tr>
<td>Water discharges – total volumes</td>
<td>100%</td>
<td>Water discharge volumes are primarily monitored in-situ (in-line) with calibrated water meters and in some cases via interpolation. At least quarterly, each operations facility reports this data to our Global EHS organization for monitoring and alignment with company targets.</td>
</tr>
<tr>
<td>Water discharges – volumes by destination</td>
<td>100%</td>
<td>Water discharge volumes by destination are primarily monitored in-situ (in-line) with calibrated water meters and in some cases via interpolation. At least quarterly, each operations facility reports this data to our Global EHS organization for monitoring and alignment with company targets. The destination of all water discharged is monitored by the site level EHS organization.</td>
</tr>
<tr>
<td>Water discharges – volumes by treatment method</td>
<td>100%</td>
<td>Water volumes are primarily monitored in-situ (in-line) with calibrated water meters and in some cases via interpolation. At least quarterly,</td>
</tr>
<tr>
<td>Water discharge quality – by standard effluent parameters</td>
<td>100%</td>
<td>Water discharge quality is monitored according to local water discharge permit requirements. This varies from site to site depending on whether there is an on-site wastewater treatment facility or if the discharge water is sent to a municipal water treatment facility. For sites that are required to monitor and report this information, coverage is 100%.</td>
</tr>
<tr>
<td>Water discharge quality – temperature</td>
<td>100%</td>
<td>Water quality is primarily monitored for temperature verification by in-line digital thermometers. This is based on local water standards and regulatory compliance obligations for the sites which we operate. For sites that are required to monitor and report this information, coverage is 100%.</td>
</tr>
<tr>
<td>Water consumption – total volume</td>
<td>100%</td>
<td>Water consumption volumes are primarily calculated by subtractive methods at our sites. At least quarterly, each operations facility reports this data to our Global EHS organization for monitoring and alignment with company targets. Where the consumption amount is negligible for a site, we assume the amount from that facility to be zero.</td>
</tr>
<tr>
<td>Water recycled/reused</td>
<td>1-25</td>
<td>Water volumes are primarily monitored in-situ (in-line) with calibrated water meters and in some cases via interpolation. At least quarterly, each operations facility reports this data to our Global EHS organization for monitoring and alignment with company targets. Recycled/reused water volumes would be reflected in the total water consumption (reduction data). Only selected sites have water recycling capabilities.</td>
</tr>
</tbody>
</table>
| The provision of fully-functioning, safely managed WASH services to all workers | 100% | Water quality is primarily monitored for verification purposes via sampling and analysis for key influent parameters (e.g., chlorine, solids) with water test calibration kits. Safely
managed WASH services are available to employees at all global locations.

**W1.2b**

(W1.2b) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, and how do these volumes compare to the previous reporting year?

<table>
<thead>
<tr>
<th>Volume (megaliters/year)</th>
<th>Comparison with previous reporting year</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total withdrawals</td>
<td>38,371.9</td>
<td>Higher</td>
</tr>
<tr>
<td></td>
<td></td>
<td>There was an 11% increase in water withdrawal from 34,656.5 megaliters/year in 2020 to 38,371.9 in 2021. The increase in 2021 was mainly driven by the increase in non-contact cooling water use, which is returned to the source in the same amount and with the same quality as was withdrawn. The fluctuation in non-contact cooling water use is generally due to seasonal variations in source water temperature.</td>
</tr>
<tr>
<td>Total discharges</td>
<td>37,391.6</td>
<td>Higher</td>
</tr>
<tr>
<td></td>
<td></td>
<td>There was an 11% increase, from 33,653.37 megaliters/year in 2020 to 37,391.6 in 2021. The increase in 2021 was mainly driven by the increase in non-contact cooling water use, which is returned to the source in the same amount and with the same quality as was withdrawn. The fluctuation in non-contact cooling water use is generally due to seasonal variations in source water temperature.</td>
</tr>
<tr>
<td>Total consumption</td>
<td>980.2</td>
<td>Lower</td>
</tr>
<tr>
<td></td>
<td></td>
<td>There was a 2% decrease from 1,003.23 megaliters/year in 2020 to 980.2 in 2021. Across our sites, we have sites with increased consumption and some with decreased consumption with an overall slight decrease.</td>
</tr>
</tbody>
</table>

**W1.2d**

(W1.2d) Indicate whether water is withdrawn from areas with water stress and provide the proportion.

<table>
<thead>
<tr>
<th>Withdrawals are from areas with water stress</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
There was a decrease from 2.5% in 2020 to 1.3% in 2021. This decrease was primarily due to a change in the criteria that AbbVie uses for classifying an area as water stressed. Our current methodology is now in alignment with the 2022 CDP Water Security Reporting Guidance.

### W1.2h

(W1.2h) Provide total water withdrawal data by source.

<table>
<thead>

</thead>
<tbody>
<tr>
<td>Fresh surface water, including rainwater, water from wetlands, rivers, and lakes</td>
<td>Relevant</td>
<td>34,315.7</td>
<td>Higher</td>
<td>There was a 12% increase, from 30,626.5 megaliters/year in 2020 to 34,315.7 in 2021. The increase in 2021 was mainly driven by the increase in non-contact cooling water use, which is returned to the source in the same amount and with the same quality as was withdrawn. The fluctuation in non-contact cooling water use is generally due to seasonal variations in source water temperature.</td>
</tr>
<tr>
<td>Brackish surface water/Seawater</td>
<td>Not relevant</td>
<td></td>
<td></td>
<td>Brackish surface water/Seawater is not an applicable withdrawal source for any AbbVie sites.</td>
</tr>
<tr>
<td>Groundwater – renewable</td>
<td>Relevant</td>
<td>1,435.8</td>
<td>Lower</td>
<td>There was a 6% decrease, from 1,524 megaliters/year in 2020 to 1,435.8 in 2021. Our site in Barceloneta, Puerto Rico implemented a significant water recycling initiative that decreased their overall well water withdrawal.</td>
</tr>
<tr>
<td>Groundwater – non-renewable</td>
<td>Not relevant</td>
<td></td>
<td></td>
<td>Groundwater – non-renewable is not an applicable withdrawal source for any AbbVie sites.</td>
</tr>
</tbody>
</table>
Produced/Entrained water | Relevant but volume unknown | Produced/Entrained water is not tracked for any AbbVie sites.
--- | --- | ---
Third party sources | Relevant | 2,620.4 | Higher | There was a 5% increase, from 2,506 megaliters/year in 2020 to 2,620.4 in 2021. The increase was primarily due to operational changes.

**W1.2i**

(W1.2i) Provide total water discharge data by destination.

<table>
<thead>
<tr>
<th>Destination Type</th>
<th>Relevance</th>
<th>Volume (megaliters/year)</th>
<th>Comparison with previous reporting year</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fresh surface water</td>
<td>Relevant</td>
<td>34,714.2</td>
<td>Higher</td>
<td>There was a 12% increase, from 31,013.6 megaliters/year in 2020 to 34,714.2 in 2021. The increase in 2021 was mainly driven by the increase in non-contact cooling water use, which is returned to the source in the same amount and with the same quality as was withdrawn. The fluctuation in non-contact cooling water use is generally due to seasonal variations in source water temperature.</td>
</tr>
<tr>
<td>Brackish surface water/seawater</td>
<td>Not relevant</td>
<td></td>
<td></td>
<td>Brackish surface water/Seawater is not an applicable discharge destination for any AbbVie sites.</td>
</tr>
<tr>
<td>Groundwater</td>
<td>Relevant</td>
<td>197.2</td>
<td>Higher</td>
<td>There was a 193% increase, from 67.4 megaliters/year in 2020 to 197.2 in 2021. Water discharged to groundwater only accounts for less than 1% of our total water discharged. The increase in 2021 was mainly driven by our site at Abbott Park that saw an increase in the amount of water discharged to groundwater.</td>
</tr>
</tbody>
</table>
| Third-party destinations | Relevant | 2,480.2 | Lower | There was a 4% decrease, from 2,572.3 megaliters/year in 2020 to 2,480.2 in 2021. AbbVie’s
Barceloneta, Puerto Rico site implemented a significant water recycling initiative that decreased their overall water withdrawal and resulting discharge to third party destination.

Additionally, AbbVie’s Abbott Park site replaced their water meters which resulted in lower meter readings in 2021, and it’s believed that the existing meters were not reading accurately prior to the replacement.

W1.2j

(W1.2j) Within your direct operations, indicate the highest level(s) to which you treat your discharge.

<table>
<thead>

<td>38,371.9</td>
<td>1,050,039.22140942</td>
<td>This is anticipated to increase when the contributions from the Allergan business operations are included in the near future. Additionally, AbbVie has targets in place to address water efficiency and decrease our dependence on water which will also drive increase our total water withdrawal efficiency in the longer term.</td>
</tr>
</tbody>
</table>

W1.4

(W1.4) Do you engage with your value chain on water-related issues?

Yes, our suppliers

W1.4a

(W1.4a) What proportion of suppliers do you request to report on their water use, risks and/or management information and what proportion of your procurement spend does this represent?

Row 1

% of suppliers by number

Less than 1%

Rationale for this coverage
AbbVie’s worldwide supplier base totals approximately 51,000 suppliers. The proportion of suppliers that AbbVie has requested to report on their water use, risks and/or management information in 2021 is approximately 206 key suppliers that account for approximately 55% of our total spend. These suppliers are key, based on a combination of annual spend and/or AbbVie’s reliance on them to assure key products (e.g., Humira, Imbruvica, HCV therapies) are brought to patients in need. Although AbbVie makes no guarantees to suppliers for future business, key suppliers are incentivized through their sharing of a common interest to assist AbbVie in its environmental footprint reduction achievements - and the overall qualitative assessment of their reputation as an AbbVie supplier.

Comment
AbbVie has incorporated water-related questions in the Supplier Sustainability Survey in 2021 which include water reduction program and water reduction goals.

W1.4b

(W1.4b) Provide details of any other water-related supplier engagement activity.

<tr>
<th>% of total procurement spend</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-25</td>
</tr>
</tbody>
</table>

Rationale for the coverage of your engagement
AbbVie’s global supplier base is expansive, totaling more than 51,000 suppliers. One supplier in a water-stressed and yet critical market in India was targeted for water-related engagement. AbbVie worked with this supplier to track wastewater effluent from AbbVie’s products being made at the supplier’s site. Wastewater is re-directed to an on-site reverse osmosis system, the output of which is then used for on-site landscape watering and supplemental boiler feed water.

In 2021, AbbVie partnered with a leading environmental non-governmental organization (NGO) in India, Green Yatra and a water conservationist, Anand Malligavad to revitalize Lake Bingipura in Bangalore, India. The efforts transformed a 28.2-acre of contaminated water body into a self-sustaining lake that brings safe drinking water to more than 5,000 people across four villages.

Impact of the engagement and measures of success
For calendar year 2021, the collaboration with the supplier resulted in recycling approximately 1.433 megaliters of water. This achievement helps to make a remarkable, positive environmental impact in a water-stressed area of India.

Comment
No comment.

W2. Business impacts

W2.1

(W2.1) Has your organization experienced any detrimental water-related impacts?
No

W2.2

(W2.2) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?
No

W3. Procedures

W3.3

(W3.3) Does your organization undertake a water-related risk assessment?
Yes, water-related risks are assessed

W3.3a

(W3.3a) Select the options that best describe your procedures for identifying and assessing water-related risks.

Value chain stage
Direct operations

Coverage

- Investors
- Local communities
- NGOs
- Regulators
- Suppliers
- Water utilities at a local level
- Other water users at the basin/catchment level
- Other, please specify
  - Other parties are considered as possible interested stakeholders as they are identified. AbbVie considers all possible stakeholders to be potential current and future interested parties in water management.

**Comment**

AbbVie updates a water risk assessment using the WRI Aqueduct tool on an annual basis for 100% of our operations and research and development sites. In 2020, we partnered with S&P Global Trucost to perform a Climate Risk Assessment for Physical Risks. Water stress was included in this assessment and 100% of our operations and research and development sites were evaluated. Water stress was identified as a growing risk across our operational sites. Both climate change and population density will have a negative impact on the water supplies in the areas where we operate causing water supplies to become more scarce and limited. There will be a corresponding increase in the cost of water, as well as potential limitations on the
amount of water that can be withdrawn. We currently have a limited number of sites in high water stress areas, but we expect that to increase to over 20 operational sites by 2050. AbbVie plans to repeat this type of risk assessment every five years or if a significant change occurs to operations locations.

Other parties are considered as possible interested stakeholders as they are identified. AbbVie considers all possible stakeholders to be potential current and future interested parties in water management.

Comment
In 2020, we partnered with S&P Global Trucost to perform a Climate Risk Assessment for Physical Risks. Water stress was included in this assessment and 35 or our most critical supplier locations were evaluated, besides the top 20 locations for our downstream third-party logistic warehouses and all 9 of our global third-party data centers. Water Stress was identified as a growing risk across those sites. Both climate change and population density will have a negative impact on the water supplies in the areas where our suppliers operate causing water supplies to become more scarce and limited. There will be a corresponding increase in the cost of water, as well as potential limitations on the amount of water that can be withdrawn. AbbVie will repeat this type of risk assessment every five years or if a significant change occurs to these locations or to the external suppliers.

W3.3b

(W3.3b) Describe your organization’s process for identifying, assessing, and responding to water-related risks within your direct operations and other stages of your value chain.

AbbVie has a well-established Risk Management program as well as a Crisis Preparedness and Business Continuity planning program. These two programs cover all of AbbVie’s operations globally. The three key steps in both programs are to
1) analyze the business for sources of risk
2) assess the risks
3) develop strategies to address the risks.

Elements of prevention, preparedness, response, recovery, and sustainability are incorporated into the programs. Water-related risks are included within the risks that are addressed by these programs. AbbVie uses a Global Risk Profile approach to evaluate and prioritize a variety of risks geographically. We take an “All Hazards” approach in our evaluations, identifying risks in the following categories:
1) Natural Hazards (including climate-related risks)
2) Security / Political / Social
3) Financial and Investment

We also consider attendant risks to regulatory compliance, employee health & safety, and reputation with input from Public Affairs, Government Affairs, Regulatory Affairs, Legal, and EHS. The Risk Management function leads the annual process of identifying risks. Short-term, Medium-term, and Long-term are considered within this process. The Risk Management
function reviews the progress of risk mitigation plans with the Executive Leadership Team on a quarterly basis.

AbbVie’s Global EHS organization leads specific Water Risk assessment activities on periodic basis. AbbVie uses the WRI Aqueduct Water Risk tool to assess current and future water risks in the areas that we operate on an annual basis. We also assess water-related risks of key suppliers globally. This tool was selected due to its widespread availability, its company-wide coverage of AbbVie’s direct and indirect operations, and general ease of use. The WRI Aqueduct tool was used to assess 100% of our direct and indirect water-related risks through year 2030 and 2040 (more than 10 years).

We also use qualitative and quantitative climate-related scenario analysis to assess climate-related physical risks. In 2020, we partnered with S&P Global Trucost to perform a Climate Risk Assessment for Physical Risks. The analysis included how water stress risk might change along three climate change scenarios High Warming Scenario (RCP 8.5), Moderate Warming Scenario (RCP 4.5), and High Climate Mitigation Scenario (RCP 2.6). These scenarios are based on the IPCC’s Representative Concentration Pathways (RCP) and are aligned with the TCFD technical guidelines (FSB, 2017). We assessed the impacts of these physical hazards across time horizons to look beyond traditional business planning cycles; 2025, 2030 and 2050. The scope of the analysis encompassed 100 global AbbVie sites and locations including all manufacturing, R&D, warehouse locations, along with selected commercial affiliate offices. It also included the top 35 locations of our critical suppliers, the top 20 locations for our third-party logistic warehouses and all 9 of our global third-party data centers. AbbVie plans to repeat this type of risk assessment every five years or if a significant change occurs to operations locations. AbbVie has initiated a more formal Climate Risk assessment for transition risks focusing primarily on regulatory transition risk. This assessment is ongoing and is expected to be complete in Q3 of 2022.

We anticipate that climate change may have varying levels of impact on our business across the short-, medium-, and long-term. AbbVie seeks to understand and anticipate these impacts to ensure we sustain the discovery and development of innovative medicines for both current and future patients. This effort involves evaluating our operations and supply chains for potential disruptions in connection with climate change and implementing contingency plans or advance preparedness. We invest in business continuity efforts that contribute to mitigating the potential for risk of loss and promote business continuity in the event a climate-related risk materializes. AbbVie’s Crisis Preparedness and Business Continuity group develops and maintains the needed infrastructure, procedures, and practices that enable us to mitigate risks and respond to crisis events that may adversely impact our business, employees or surrounding communities. Each operating and commercial division have documented business continuity plans that address key products and operations. The overall Crisis Preparedness and Business Continuity plan is reviewed at the executive level on an annual basis, and all business continuity plans are reviewed on a biennial basis. AbbVie also invests in the assurance of supply activities including selecting redundant suppliers for raw materials, manufacturing products at multiple locations globally, and redundant shipping supply chains to deliver our products. The combination of our crisis preparedness activities and our assurance of supply activities is the way that AbbVie seeks to effectively address increasing climate risk.
W4. Risks and opportunities

W4.1

(W4.1) Have you identified any inherent water-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes, both in direct operations and the rest of our value chain

W4.1a

(W4.1a) How does your organization define substantive financial or strategic impact on your business?

Substantive risks for the company are set at a much higher financial and strategic impact threshold. Substantive strategic impacts would include things that could negatively impact our product pipeline, manufacturing capabilities, regulatory compliance, employee health & safety, and our reputation. Climate risks would generally be considered to have a substantive financial impact when greater than $1 million on an annual basis, though such an impact should not be equated to or taken as a representation about “materiality” under the US federal securities laws or any similar legal or regulatory regime globally. Climate risks with strategic impact to the business would also be considered substantive.

W4.1b

(W4.1b) What is the total number of facilities exposed to water risks with the potential to have a substantive financial or strategic impact on your business, and what proportion of your company-wide facilities does this represent?

<table>
<thead>
<tr>

Potential financial impact figure - minimum (currency)

Potential financial impact figure - maximum (currency)

Explanation of financial impact
   No explanation of financial impact.

Primary response to risk
   Adopt water efficiency, water reuse, recycling and conservation practices

Description of response
   AbbVie’s primary response is to install new water conservation technology and conservation practices. The Singapore site is ISO 14001 certified and leverages that program to drive water reductions. However, AbbVie realizes the importance of engagement with public policy makers, other stakeholders on the island, and the community within Singapore on this issue. Although this risk has a high likelihood and a high impact, our Crisis Preparedness strategy and Assurance of Supply strategy have put us in a position to minimize the impact, thus making a scenario that reaches a significant financial impact unlikely.

Cost of response
   50,000

Explanation of cost of response
   AbbVie is managing the water risk and the cost impact by driving water reductions and implementing water management programs at the site. The cost of the response is estimated as the annual cost for the ISO 14001 program along with annual capital spending to drive water reductions at the site.

Increased stakeholder concern or negative stakeholder feedback

Primary potential impact
Supply chain disruption

Company-specific description
Water-scarcity risk for supply chain vendor could result in loss of products or product inputs that supplier provides to AbbVie.

Timeframe
More than 6 years

Magnitude of potential impact
Low

Likelihood
Unlikely

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)

Potential financial impact figure - minimum (currency)

Potential financial impact figure - maximum (currency)

Explanation of financial impact
No explanation of financial impact.

Primary response to risk
Upstream
Increase supplier diversification

Description of response
AbbVie would need to qualify other supplier(s) capable of meeting pharmaceutical industry grade product specifications (i.e., AbbVie would potentially need to source supply chain product from another qualified vendor). This can commonly take up to one year for new supplier evaluations to be completed.

Cost of response

Explanation of cost of response
Costs would include the time and resources to identify another supplier, purchase the appropriate equipment, transfer the product to the new supplier, and start up the process with the new supplier. It is difficult to calculate a specific cost for this response as every product and supplier are unique.

W4.3

(W4.3) Have you identified any water-related opportunities with the potential to have a substantive financial or strategic impact on your business?
Yes, we have identified opportunities, and some/all are being realized

W4.3a

(W4.3a) Provide details of opportunities currently being realized that could have a substantive financial or strategic impact on your business.

Type of opportunity
Efficiency
Primary water-related opportunity

Improved water efficiency in operations

Company-specific description & strategy to realize opportunity

Abbott Park - Capital reinvestment in aging water utilities equipment at manufacturing site, upgrading purified water system with more water and energy efficient equipment by replacing an aging water still with new Reverse Osmosis technology.

Estimated timeframe for realization

Current - up to 1 year

Magnitude of potential financial impact

Low

Are you able to provide a potential financial impact figure?

No, we do not have this figure

Type of opportunity

Efficiency

Primary water-related opportunity

Water recovery from sewage management

Company-specific description & strategy to realize opportunity

Barceloneta, Puerto Rico and Tuas, Singapore - In Puerto Rico the site treats wastewater effluent via Reverse Osmosis. This water is then recycled and used in the cooling tower basins on the site. The opportunity for the site is to optimize the process to maximize the use of the system and expand the use of this water to other applications. In Tuas, Singapore the site purchases grey water from the municipality. This water is used in the cooling tower basins on the site. The opportunity for the site is to maximize the use of this water in other applications such as fire protection water and boiler feed water.

Estimated timeframe for realization

Current - up to 1 year
Magnitude of potential financial impact
Medium

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact
The unit cost of water in Puerto Rico is very low due to the fact that the site sources water from an on-site well. The financial return for this project is low. The cost for grey water in Singapore is about 50% of the cost for the potable municipal water. The quantity of water used is relatively low so the financial return for the project is low also.

Type of opportunity
Efficiency

Primary water-related opportunity
Improved water efficiency in operations

Company-specific description & strategy to realize opportunity
Singapore - A project to expand the existing rainwater harvesting has been initiated.

Estimated timeframe for realization
Current - up to 1 year

Magnitude of potential financial impact
Low

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact
The harvested rainwater is used in place of grey water that is purchased from the municipality. The cost of this water is low, and the amount of water harvested is small resulting in a low financial return.

---

**Type of opportunity**

Efficiency

**Primary water-related opportunity**

Improved water efficiency in operations

**Company-specific description & strategy to realize opportunity**

South San Francisco - A rainwater harvesting system has been designed into a new facility that AbbVie started occupying in 2021.

**Estimated timeframe for realization**

1 to 3 years

**Magnitude of potential financial impact**

Low

**Are you able to provide a potential financial impact figure?**

No, we do not have this figure

**Potential financial impact figure (currency)**

**Potential financial impact figure – minimum (currency)**

**Potential financial impact figure – maximum (currency)**

**Explanation of financial impact**

The rainwater harvesting system is relatively small and only intended to reduce a small amount of municipal water that is used in restroom facilities in the building. The cost of this water is low, and the amount of water harvested is small resulting in a low financial return.

---

**W5. Facility-level water accounting**

W6.5

(W6.5) Do you engage in activities that could either directly or indirectly influence public policy on water through any of the following?
Yes, other
W6.5a

(W6.5a) What processes do you have in place to ensure that all of your direct and indirect activities seeking to influence policy are consistent with your water policy/water commitments?

Our water strategy is established and communicated as our Corporate Water Policy. Our policy states that we will take steps to reduce water use while developing and delivering our products, as well as engaging where there is the opportunity to influence or impact our use, procurement, or conservation of water. In 2021, we enhanced our ESG oversight and governance with the establishment of an ESG Council. The ESG Council ensures strategic, enterprise-aligned delivery on AbbVie’s ESG Framework. Chaired by our Vice Chairman, External Affairs and Chief Legal Officer and composed of senior cross functional leaders, the ESG Council’s purpose is to champion business sustainability and mitigate business risks by monitoring, reviewing, and recommending actions in support of our ESG framework and strategy. The ESG Council meets at minimum once per quarter and maintains sub-committees aligned to AbbVie’s material topics which included Environmental Sustainability. This council would have oversight and decision-making ability in a situation where engagement with a trade associate may not align with our policy or commitments.

W6.6

(W6.6) Did your organization include information about its response to water-related risks in its most recent mainstream financial report?

No, and we have no plans to do so

[TCFD Report W6.6.pdf]

AbbVie has not included information about its response to water-related risks in its most recent mainstream financial report, however, AbbVie created a standalone TCFD report in early 2022. This report will be attached.

W7. Business strategy

W7.1

(W7.1) Are water-related issues integrated into any aspects of your long-term strategic business plan, and if so how?

<table>
<thead>
<tr>

Water-related OPEX (+/- % change)
0

Anticipated forward trend for OPEX (+/- % change)
5
Please explain
The water-related CAPEX spend for the reporting year was effectively flat from the previous level of spend. We anticipate an approximate 5% increase for the next reporting year. The water-related OPEX spend for the reporting year was effectively flat from the previous level of spend. We anticipate an approximate 5% increase for the next reporting year.

W7.3

(W7.3) Does your organization use scenario analysis to inform its business strategy?

<table>
<thead>
<tr>
<th>Use of scenario analysis</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row 1</td>
<td>Yes</td>
</tr>
</tbody>
</table>

In 2020, we partnered with S&P Global Trucost to perform a Climate Risk Assessment for Physical Risks. The analysis looked at on how physical hazards such as water stress might change along three climate change scenarios High Warming Scenario (RCP 8.5), Moderate Warming Scenario (RCP 4.5), and High Climate Mitigation Scenario (RCP 2.6). These scenarios are based on the IPCC’s Representative Concentration Pathways (RCP) and are aligned with the TCFD technical guidelines (FSB, 2017). We assessed the impacts of these physical hazards across time horizons of 2025, 2030 and 2050. This physical risk assessment will be repeated every five years or if a significant change occurs within our operational footprint.

W7.3a

(W7.3a) Provide details of the scenario analysis, what water-related outcomes were identified, and how they have influenced your organization’s business strategy.

<table>

<tbody>
<tr>
<td>Row 1</td>
<td>High Climate Mitigation Scenario (RCP 2.6)</td>
<td>In 2020, AbbVie performed a climate physical risk assessment which included water stress. In 2020 only a limited number of operational sites were deemed to be in high water stress locations. By 2050, over 20 of our operational sites will be in high water stress areas. This poses a significant medium-term and long-term risk.</td>
<td>AbbVie continues to integrate the results and findings from this climate physical risk assessment into our long term planning strategy. One of the initial conclusions from this assessment is that we need to reconsider our sustainability targets related to water. Currently AbbVie has a global absolute reduction water target. We are currently evaluating changes to that target to make it</td>
</tr>
</tbody>

### Category of target

Water withdrawals

### Level

Company-wide

### Primary motivation

Reduced environmental impact

### Description of target

Reduce water withdrawal by 20% including non-contact cooling water (absolute over a 2015 baseline).

### Quantitative metric

Absolute reduction in total water withdrawals

### Baseline year

2015

### Start year

2016

### Target year

2025

### % of target achieved

0

### Please explain

For the reporting year 2021, progress toward the total absolute water withdrawal target is trending unfavorably (increase of 14%) vs. the 2015 baseline as verified by third-party
verification audits. Although, little progress has been made against this target, AbbVie has developed a plan and roadmap to achieve the 20% reduction by 2025.

From a business standpoint, water is an essential raw material for a wide range of our products (both for direct manufacturing and indirect cleaning activities). Every day, our operations rely on water for manufacturing medicines that patients need. As global concern about water scarcity continues to rise, it has become increasingly important for AbbVie to safeguard this vital resource and participate in the protection of our environment. This is a company-wide goal because water is used and must be responsibly managed at all manufacturing and R&D sites globally.
